Online Hotel Reservation Software

ReGIS (Hotel Reservation & Guest Information System) software is POWER's online hotel reservation and guest information software and system. The system is geared to increase online sales for small boutique hotels and villas. It gives potential customers the possibility to review room availability and rates, as well as book a reservation and receive an immediate confirmation number online in three very easy, user friendly steps. [Learn More >](#)

Hotel Booking Solutions

ReGIS provides the tools to help you run your operation at a greater level of productivity, excel at customer service and increase your bottom line with minimal effort and cost. When customers book online, you will receive notification via email. Your guests will receive confirmation by email including a booking reference, your contact details, your policies and any other information you want to provide. You are also able to set up special offers and discounts. [Learn More >](#)

Web Reservation Systems

Features & Benefits Research indicates that websites without a real-time reservation facility lose 30% of their potential. Why take that chance? Control your room rates and room inventory. You control how many rooms are available through your website, all without losing rooms from your general availability. Create unlimited room types, bed types, rate structures, promotions, inventory and reservation rules. [Learn More >](#)
